

Intelligent Vehicles

Name: _____

There are places on earth to which humans cannot travel because it is too difficult or dangerous. Instead, unmanned vehicles are used to reach these places!

1 What kinds of vehicles are used to reach these difficult or dangerous places?

2 It's easy to understand why deep-sea robot submersibles, satellites, and space exploration vehicles are unmanned, but why are unmanned planes necessary?

3 What skills or talents do you think one needs to operate an unmanned aerial vehicle (UAV)?

Eye in the Sky

Humans have been improving UAVs for several decades, and many versions are currently in use. Most are owned and operated by the United States government. Some UAVs are used by the

military to do reconnaissance, helping to keep soldiers safe. UAVs are also used to investigate and survey the earth.

Visit www.uavforum.com to find more information and news about UAVs for military, civilian, and commercial purposes.
