

Max's Math Adventures

Take some time to solve the rhyme

Name: _____

Date: _____

Magnifying Max

Two ants walked across the floor.
They were followed by 4 more.
Next were 6 ants looking great.
Then came along a group of 8.

In marched 10 more happy ants.
Then came 12 doing a dance!
If each group of ants grows bigger by 2,
How many come next? We haven't a clue!

One day after class
I took my magnifying glass.
I held it low and looked right through
Until something came into view.

Max's Challenge:

If each group of ants continues to grow by two, then how many ants are in the next group? Fill out the activity below to help you find your answer.

The next group includes:

- A. 13 ants
- B. 14 ants
- C. 24 ants

If each group of ants is growing by two, then draw the next three groups of ants to crawl across Max's floor. Write in the number of ants next to each group.
