

Workshop 4: Crime Lab Science**Quick Project**
Crime Survey

Does crime science scare off would-be criminals?

Project: Work in groups. Conduct a survey about whether the power of crime science makes people think twice before committing a crime.

Procedure

1. **Create a survey.** As a group, create a survey like this one.

Question: The chance of a criminal getting caught is stronger than ever, thanks to crime science. Do you think the greater chance of getting caught scares people away from committing crimes?

Definitely

Probably

Definitely Not

Probably Not

You can add or change questions.

2. **Conduct the survey.** Plan how you will gather data. Will you pass out surveys to students? Or will you ask the questions and take notes on the answers?

- Begin by surveying people in your class.
- If you like, survey friends, relatives, and others.

3. **Present your work.** Decide how you will present your results:

- First, figure out the total number of each type of response to the question.
- Then create a bar or a circle graph.
- Present your findings. Talk about your reactions to what you learned.
