

Name: _____

Money and You

Money has four uses: It can be saved, invested, donated, or spent. Creating a budget, or financial plan, is a great way to help you make choices about how you use your money. Showing your budget in a circle graph can let you visualize those choices. Complete the budget circle graph below by answering the questions that follow.

1. You have a total budget of \$100. You donate \$10 to your favorite charity. What fraction of your budget have you used? _____
2. You buy 4 books that cost \$6 each and one action figure that costs \$16. The total you spent is what percent of your \$100 budget? _____
3. You decide to invest in your favorite toy company. If each share of stock in the company costs \$4 and you buy 5 shares, what percent of your \$100 budget is being used for this investment? _____
4. Now that you've made a donation, a purchase, and an investment, how many dollars do you have left in your \$100 budget to save? _____

5. Complete the circle graph in the box to the right to show how your \$100 is divided up for donations, spending, investing, and savings. Use the answers to questions 1-4 to determine the size of each section of your circle graph. We have filled in one section to help you get started. (NOTE: The pie slice is based on converting to percent the answer to question 1.)
