# Hands-On Science

## (No Lab Required)

Use the pattern below to make the windmill faces for your wind turbines to complete the hands-on activity on p. 14. Trace this design onto the center of a paper plate. Cut along the solid lines (but don't cut out the center circle!), and then fold the blades up along the dotted lines. Now you're ready to attach your windmill face to the eraser as described in Step 4.
